HttpUnit TestCase

public area

```
@Test
@DisplayName("Testing with Valid Inputs")
public void testWithValidCredentials() throws Exception {
    System.out.println("LoginTest.testWithValidCredentials()");

    // get response by sending the request to the URL
    String url = "http://localhost:9999/HttpUnit-LoginApp/index.html";
    WebResponse response = conversation.getResponse(url);

    // get access to the form from the response
    WebForm form = response.getForms()[0];

    // setting the request params values to the form object
    form.setParameter("uname", "sachin");
    form.setParameter("password", "tendulkar");

    // submit the form to get the response
    WebResponse actualResponse = form.submit();

    // Get the output from the response object
    String actualOutput = actualResponse.getText().trim();

    // perform assertion to validate the output
    assertEquals("valid credentials", actualOutput);
}
```
